Powershell Trick: Convert text to ASCII art (/entries/powershell/powershell-trick-convert-text-to-ascii-art)

October 4, 2017 01:40PM

As PowerShell has plain command based console if you want to show different font or different bigger font on the same console as output, you will have to use ASCII Text art, I had got a request to write a script to convert any text to ASCII art. Only weirdness in the request I found was, whatever output generated as ascii art, should not be captured to file or by coping it. Someone might argue using Write-Host cmdlet, but Here I have found perfect use case for my need of using Write-Host, I have used it with backgroundcolor parameter to show font, keeping few spaces no color.

Below is the example of one of the letter A. (There are only capital alphabets, small letters are shown as capital alphabets only), You can create your own font and it is easily replaceable, I am planning to create external file in future with different fonts.

```
1 Write-Host $(" " * 6) -BackgroundColor 'Yellow' -NoNewline; Write-Host " "; Write-Host " " -B
```

You can save script in `.\Convertto-TextASCIIArt.ps1`. There is a parameter `-Text` where you provide your custom text message. and `-FontColor` has choice (Black, DarkBlue, DarkGreen, DarkCyan, DarkRed, DarkMagenta, DarkYellow, Gray, DarkGray, Blue, Green, Cyan, Red, Magenta, Yellow, White). If you need special character send me comment on the blog so I can add it if required.

Difficulty running script go thru my earlier blog.

Different ways to bypass Powershell execution policy :ps1 cannot be loaded because running scripts is disabled (<http://vcloud-lab.com/entries/powershell/different-ways-to-bypass-powershell-execution-policy-ps1-cannot-be-loaded-because-running-scripts-is-disabled>)

Installing, importing and using any module in powershell (<http://vcloud-lab.com/entries/powershell/installing-importing-and-using-any-module-in-powershell>)

A screenshot of a Windows PowerShell terminal window. The title bar is green and says "Windows PowerShell". The background is dark blue. The prompt is "vcloud-Lab.com > C:\Temp>". The user enters ".\Convertto-TextASCIIArt.ps1 -FontColor red -Text 'Hello world!'". The output is "HELLO WORLD!" in large, red, blocky ASCII art. The prompt is "vcloud-Lab.com > C:\Temp>". The user enters ".\Convertto-TextASCIIArt.ps1 -FontColor Cyan". The output is "# THIS IS TEST!" in large, cyan, blocky ASCII art. The prompt is "vcloud-Lab.com > C:\Temp>". The user enters ".\Convertto-TextASCIIArt.ps1". The output is "# THIS IS TEST!" in large, yellow, blocky ASCII art. In the top right corner, there is a logo for "vcloud-lab.com" with a blue cloud and a flask icon, and the text "Full Automation Blog" below it.

```
Windows PowerShell
vcloud-Lab.com > C:\Temp>
vcloud-Lab.com > C:\Temp> .\Convertto-TextASCIIArt.ps1 -FontColor red -Text 'Hello world!'
HELLO WORLD!
vcloud-Lab.com > C:\Temp>
vcloud-Lab.com > C:\Temp> .\Convertto-TextASCIIArt.ps1 -FontColor Cyan
# THIS IS TEST!
vcloud-Lab.com > C:\Temp>
vcloud-Lab.com > C:\Temp> .\Convertto-TextASCIIArt.ps1
# THIS IS TEST!
vcloud-Lab.com > C:\Temp>
```

If you need more font choices, you can use `-Online` parameter, which will use api and fetch selected text from <http://artii.herokuapp.com> using `Invoke-WebRequest` using `Get` method. For complete font list (figlet) browse http://artii.herokuapp.com/fonts_list or user `-FontName` Parameter. Font name (figlet name) is case sensitive.

A screenshot of a Windows PowerShell terminal window. The title bar is green and says "Windows PowerShell". The background is dark blue. The prompt is "PS C:\temp>". The user enters ".\Convertto-TextASCIIArt -Text 'http://vcloud-lab.com' -Online -FontColor Red -Fontname big". The output is "http://vcloud-lab.com" in large, red, outlined ASCII art. In the top right corner, there is a logo for "vcloud-lab.com" with a blue cloud and a flask icon, and the text "Full Automation Blog" below it.

```
Windows PowerShell
PS C:\temp>
PS C:\temp>
PS C:\temp>
PS C:\temp>
PS C:\temp> .\Convertto-TextASCIIArt -Text 'http://vcloud-lab.com' -Online -FontColor Red -Fontname big
http://vcloud-lab.com
PS C:\temp>
PS C:\temp>
```

@John, Thanks for the notifying the same. I have updated the link

@Gyz, -FontHeight default value is 5 and it represents the current font i created (There are 5 horizontal lines), I have used it for future use. This can be modified if you create your own font.

Hi, Thanks for great script.

One issue I have is when using parameter -FontHeight with higher value than the default value of 5, it produces some exception:

-NoNewLine : The term '-NoNewLine' is not recognized as the name of a cmdlet, function, script file, or operable program. Check the spelling of the name, or if a path was included, verify that the path is correct and try again.

At C:\Temp\Show-BigFontOnConsole.ps1:45 char:1

+ -NoNewLine

+ ~~~~~

+ CategoryInfo : ObjectNotFound: (-NoNewLine:String) [], CommandNotFoundException

+ FullyQualifiedErrorId : CommandNotFoundException

Yours github link is missing a colon

:

https// is what it is currently.
